

Shallow Sump Options

With some yachts there is very limited space beneath the engine and we have specifically designed a shallow sump option for these installations. The main difference between the two options is the position of the sump pump connection. The following measurements are from the crankshaft centreline.

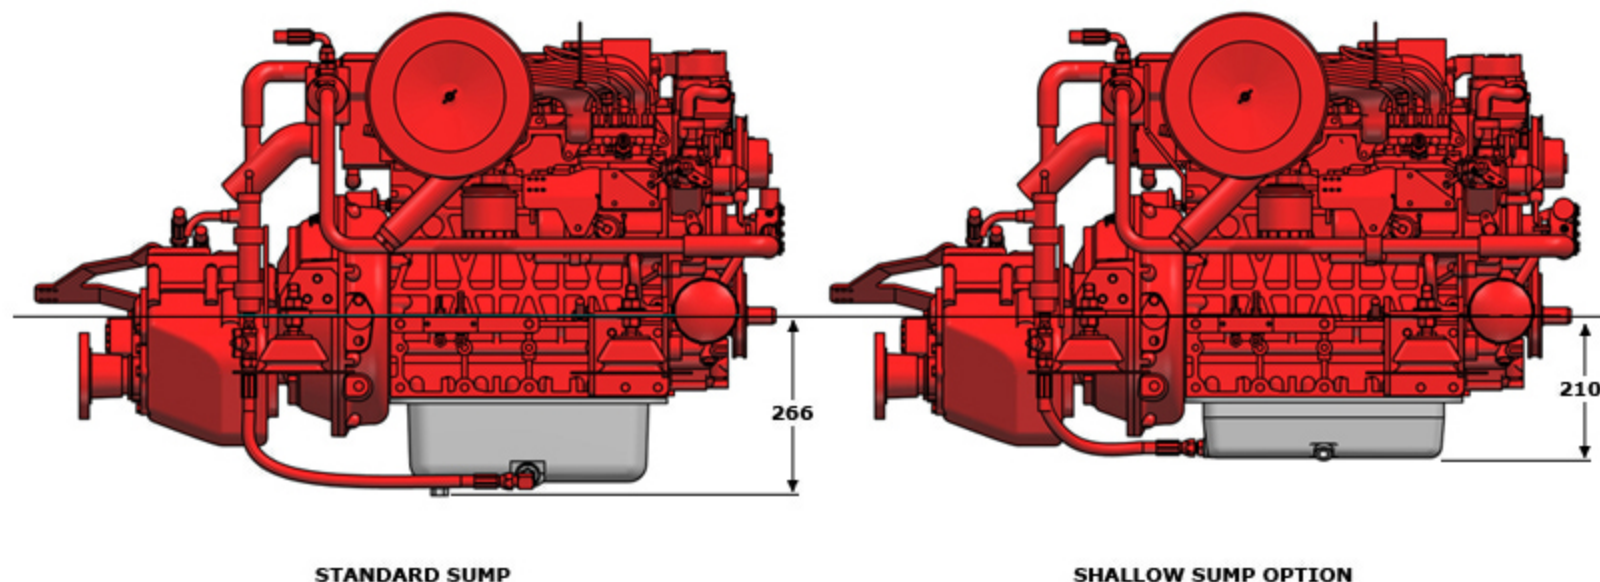

Beta 10 to Beta 20

Beta 28 to Beta 38

Beta 43 to Beta 60

Beta 75 to Beta 150

There is only one sump option with these engines as the sump is already very compact.
